**Abstract.** A list of the Cerambycidae of Bolivia is presented. It totals 1,259 species including 496 new country records. When available the known geographical distribution by department is shown for each species.

**Keywords.** Coleoptera, Cerambycidae, checklist, Bolivia, faunal survey, new country records.

**Resumen.** Se presenta una lista de los Cerambycidae de Bolivia. En total son 1.259 especies incluyendo 496 que son nuevas para el país. En los casos que ha sido posible, la distribución departamental se presenta para cada especie.

**Palabras clave.** Coleoptera, Cerambycidae, inventario, Bolivia, estudio faunístico, nuevos registros para el país.

### Introduction

This checklist records many of the species collected by the authors and others who are participating in the "Bolivian Cerambycid Project" a cooperative program among the Museo de Historia Natural "Noel Kempff Mercado" (MNKM), Santa Cruz de la Sierra, Bolivia, Florida State Collection of Arthropods (FSCA), Gainesville, FL and the American Coleoptera Museum (ACMT), San Antonio, TX. This long-term program was initiated in 2000 with the primary objective to conduct a survey of the Bolivian cerambycid fauna. All holotypes described from collected specimens, and a significant portion of all other collected specimens, are being deposited in the MNKM. The FSCA is

serving as the primary depository in the U.S. with a synoptic working collection maintained in the ACMT.

Bolivia is politically divided into nine departments as shown in Fig. 1. Species records for departments are shown as specimen data allows. No effort has been made to research existing literature records prior to 2000 to obtain additional department data. Abbreviations used in the checklist are: BO = Bolivia (country record only); PN = Pando; BN = Beni; SC = Santa Cruz; CO = Cochabamba; LP = La Paz; OR = Oruro; PT = Potosi; CQ = Chuquisaca; TR = Tarija.

Bolivia is a landlocked country in central South America of 1,098,579 sq km, or about three times the area of Montana. It exhibits tremendous geographical, floral, and faunal diversity. To the north is the

southern extension of the Amazon Basin, with extensive lowland rain forests and savanahs (*llanos*); to the southeast are dry scrub and thorn forests (*chaco*). Cloud forests (*yungas*) cloak the shoulders of the Andes, which dominate the southeastern third of the country. Above the *yungas* are wet grasslands called the *puna*. Between the two ridges of the Andes lies the *altiplano*, a high, dry plateau.

Where these different habitats meet and intergrade can be areas of dramatic faunal and floral diversity, such as in the eastern part of the Department of Santa Cruz. For example, Amboró Protected Area, in which 830 species of birds have been recorded, contains 11 Holdridge Life Zones, the same as the entire country of Costa Rica (Clark Gemuseus and Sagot 1996). Similar numbers of cerambycid species have been collected nearby in the vicinity of Buena Vista.

The checklist includes higher taxonomic classifications and generally follows the arrangement of Monné and Giesbert (1995). Within tribes, genera are listed alphabetically as are the species within the genera.

### Discussion

The checklist includes 1,259 cerambycid species with 496 (40 per cent) newly recorded for Bolivia. Among the nine cerambycid subfamilies in the western hemisphere all but Asemiinae and Spondyliinae are recorded from Bolivia. Additionally, 30 of the 123 western hemisphere tribes (24 per cent) are found there with seven newly recorded. Among the 501 genera in the checklist, 137 (28 per cent) represent new country records. Some 928 of the species (74 per cent) are recorded from Santa Cruz Department. To a great extent this reflects collecting bias by the authors and others. Although not included in the checklist, more than 300 additional, but as yet undetermined, species have been collected by project participants. About one-third of these are acanthocinines with the remainder scattered across 40 additional tribes. The scarcity of collections from departments other than Santa Cruz and the amount of undetermined material on hand explains the "preliminary" nature of this checklist. New country records for tribes, genera and species are in **bold** face type.

### Acknowledgments

The authors wish to acknowledge and thank the numerous individuals and institutions who have contributed to this checklist. We are especially grate-

ful to our Bolivian cooperators Julieta Ledezma Arias, Chief, Department of Entomology, and José Luis Aramayo, Research Associate, Museo de Historia Natural "Noel Kempff Mercado," Santa Cruz de la Sierra, Bolivia for authorizing and supporting our activities in Bolivia. For access to institutional collections in their care we are indebted to: Jaime Sarmiento, Colección Boliviana de Fauna del Museo de Historia Natural, La Paz, Bolivia; Julieta Ledezma Arias, Museo de Historia Natural "Noel Kempff Mercado", Santa Cruz de la Sierra, Bolivia; John Rawlins, Robert Davis, and Bob Androw, Carnegie Museum, Pittsburg, PA.; Steven Lingafelter, US Natural History Museum, Washington, DC; Paul Skelley, Florida State Collection of Arthropods, Gainesville, FL; Ubirajara Martins, Museu de Zoologia, Universidade de São Paulo, São Paulo, Brazil and Miguel Monné, Museu Nacional, Universidade Federal do Rio de Janeiro, Rio de Janeiro, Brazil. We also greatly appreciate the following participants in the Bolivian Cerambycid Project and for their sharing collected specimens and data: Robin Clark, Andrew Cline, Byrd Dozier, Charyn Micheli, and Norm Woodley. For the loan of specimens or supplying data from their collections we thank Fray Andres Langer, Joe Eger, Martin Hauser, and Stewart Peck.

This checklist would not have been possible without the hundreds of species identifications provided by Ubirajara Martins and Miguel Monné. Additionally, Maria Helena Galileo, José Giorgi, Steven Lingafelter, Paulo Magno, José Mermudes, Marcela Monné, Dilma Solange Napp, Antonio Santos-Silva, Gérard Tavakilian, and Frank Hovore contributed to this process. Our heartfelt thanks to all of them for their timely and willing assistance in this regard.

Special thanks and recognition to Miguel Monné and Frank Hovore for their continuing work to provide timely updates to the original "Checklist of the Cerambycidae and Disteniidae (Coleoptera) of the Western Hemisphere" by Monné and Giesbert (1993). Their regular and comprehensive updates have proved to be an invaluable resource in preparing this checklist. We extend a special thanks to Ubirajara Martins in recognition of his many contributions to the project. We especially appreciate his helpfulness in responding to a constant flow of queries and his willingness to interrupt his own projects, time after time, to help with ours. Frank Hovore and Antonio Santos-Silva carefully reviewed the manuscript and greatly contributed to its final quality.

Finally, our acknowledgments would not be complete without a bow to the late Ed Giesbert. It was his enthusiastic accounts that first sparked our interest in the Buena Vista area.

**Figure 1.** Outline map of Bolivia showing departments and the abbreviations used in the checklist. BO = Bolivia (country record only); PN = Pando; BN = Beni; SC = Santa Cruz; CO = Cochabamba; LP = La Paz; OR = Oruro; PT = Potosí; CQ = Chuquisaca; TR = Tarija.
